Mohammad Dilnawaj

Senior Software Engineer

Java Full Stack Developer with nearly 5 years of professional experience building backend and full-stack applications using Java, Spring Boot, REST APIs, microservices and React.js. Experienced in Kafka-based event-driven systems, Spring Cloud, MySQL, Redis and AWS. Hands-on experience migrating services to Spring Boot, developing REST APIs, integrating distributed services, and deploying containerized applications using Docker and Kubernetes. Also experienced in integrating RAG, SLM/LLM capabilities into applications using Spring AI.

WORK EXPERIENCE

Software Developer(Full Stack Developer)

Rchilli Company

Sep, 2021 - Mar, 2024 | Mohali, Punjab

Achievements/Tasks

- Collaborated with **SAP** and **Oracle** to enhance enterprise solutions & developed ERP APIs for Salesforce.
- Integrated multiple job portals **(Job Target, Google Jobs)** into **ATS**, increasing system functionality by **15%** and streamlining recruitment processes.
- Enhanced code performance by 30% by migrating the database from **MySQL** to **Google BigQuery**, utilizing advanced querying and data indexing techniques

Software Developer (Full Stack Developer)

NextGenVision Technolog

Role eliminated due to entire team layoffs

Mar, 2024 - Mar, 2025 | Noida, Uttar Pradesh

Achievements/Tasks

- Optimized ReactJS code by migrating from **Redux Thunk** → **Redux Toolkit**, reduced boilerplate code.
- Integrated **Eureka** for service discovery and leveraged **Kafka** to ensure robust/fault-tolerant inter-service communication within **microservices** architecture.
- Deployed applications on AWS **EC2** with **RDS** for database management and **S3** for object storage, while using **CloudWatch** to monitor application performance.

Senior Software Engineer — PayU Client Project

Wits Innovation Lab

PayU client contract concluded.

Sep, 2025 - Jul, 2026 | Kharar, Punjab

Achievements/Tasks

- Migrated the **Assessment Engine** from **Django to Spring Boot**, developing REST APIs and integrating **Feature Engine** and **PS Core** while maintaining logic & functional parity.
- Developed **Spring Boot** services to integrate with the **Feature Engine** and orchestrate REST API calls for seamless communication between **distributed services**.
- Migrated the application from **Docker Compose** to **Kubernetes** to improve **fault tolerance** through self-healing and automatic pod restarts & deployed the application on AWS **EKS** using **Helm** charts and configured application monitoring.

EDUCATION

B.Tech in Information Technology

Chandigarh Group of College

Aug, 2017 - Aug, 2021

SKILLS

Spring Boot | Hibernate | JPA | RAG | Orcle | ReactJS | Helm | Vercel | JavaScript | MySQL | PostGreSQL | MongoDB | Redis | RDS | S3 | Docker | Kubernetes | CI/CD | AWS | Jenkins | Spring Cloud | Kafka | Eureka | SLM & LLM | Jira | SonarQube | Github | RTK | BitBucket | CloudWatch | Prometheus | Grafana

PERSONAL PROJECTS

Blogger Website

Key Features

- Engineered a full-stack blogging platform (BloggerHub) with features like post, comment, like/dislike, share, save & subscribe. Built backend with **Java/Spring Boot** , **MySQL** , **Redis** , **JWT** , integrated **AWS SES** for emails and **Razorpay** for payments.
- Built frontend using **React JS** , **Redux Toolkit** , **Bootstrap** & **Toastify** . Deployed on **AWS Elastic Beanstalk** with **S3** for storage and **SQS** for async bulk blog processing.
- Integrated AI features: RAG semantic search (**PGVector**), AI blog writing assistant, Manual ReAct agentic planner & SLM-based bulk blog import using **Gemma3 via Ollama** on **SpringAI**

E-Voting Application

Key Features

- Architected **Microservices** (Voter, Candidate,Election Commission, Party) using **Spring Boot, MySQL, SMTP** and **HazelCast** cache with **Kafka**-based event handling & secured application using **JWT** Auth.
- Developed responsive frontend in **React JS, Context Api, Bootstrap** & **HTML** with secure, real-time vote casting and result tracking & **Axios** for API calls & deployed on **Vercel**.
- Utilized **Spring Cloud** with Eureka for dynamic service discovery, **API Gateway** for routing, **Feign clients** for inter-service communication, and **Resilience4j** for fault tolerance to ensure a scalable, maintainable, and highly available microservices system.

ACHIEVEMENTS

5★ in DSA and 3★ in Java on HackerRank

Blind Coding Winner at College level.
